Communications Futures Program

Fall 2015 All Members Meeting

Let's start with an exercise...

Can you picture in your head a...

1. Light Bulb
2. Automobile
3. Music Player
4. Watching a movie (on a screen)

Light Bulb

Automobile

Music Player

Watching a movie (on a screen)

Dominant Design (DD): A specific path, along an industry's design hierarchy, which establishes dominance among competing design paths. (Utterback, Suárez 1993; Abernathy, Utterback 1975)

- Variation and Selection
- Arises from experimentation
- May drastically reduce performance requirements
- May not be predetermined

A DD is not at the extreme end of performance in terms of technology, business model, consumer preferences

**A DD is an emergent phenomena.
Predictive value comes from analyzing design hierarchies.**

Light Bulb (Electric Lighting) Chronology – 1880-1896

- 1880 Gas has been dominant for 70 years, but had low efficiency
- 1880 Edison establishes his company following two years of experimentation
- 1880 First installation on the ship *Columbia*
- 1881 First on land at New York Safe Deposit Co
- 1882 Edison Isolated Lighting Company Established. Bulbs sold directly to customers.
- 1885 Edison sues imitators (Upheld in 1891-93)

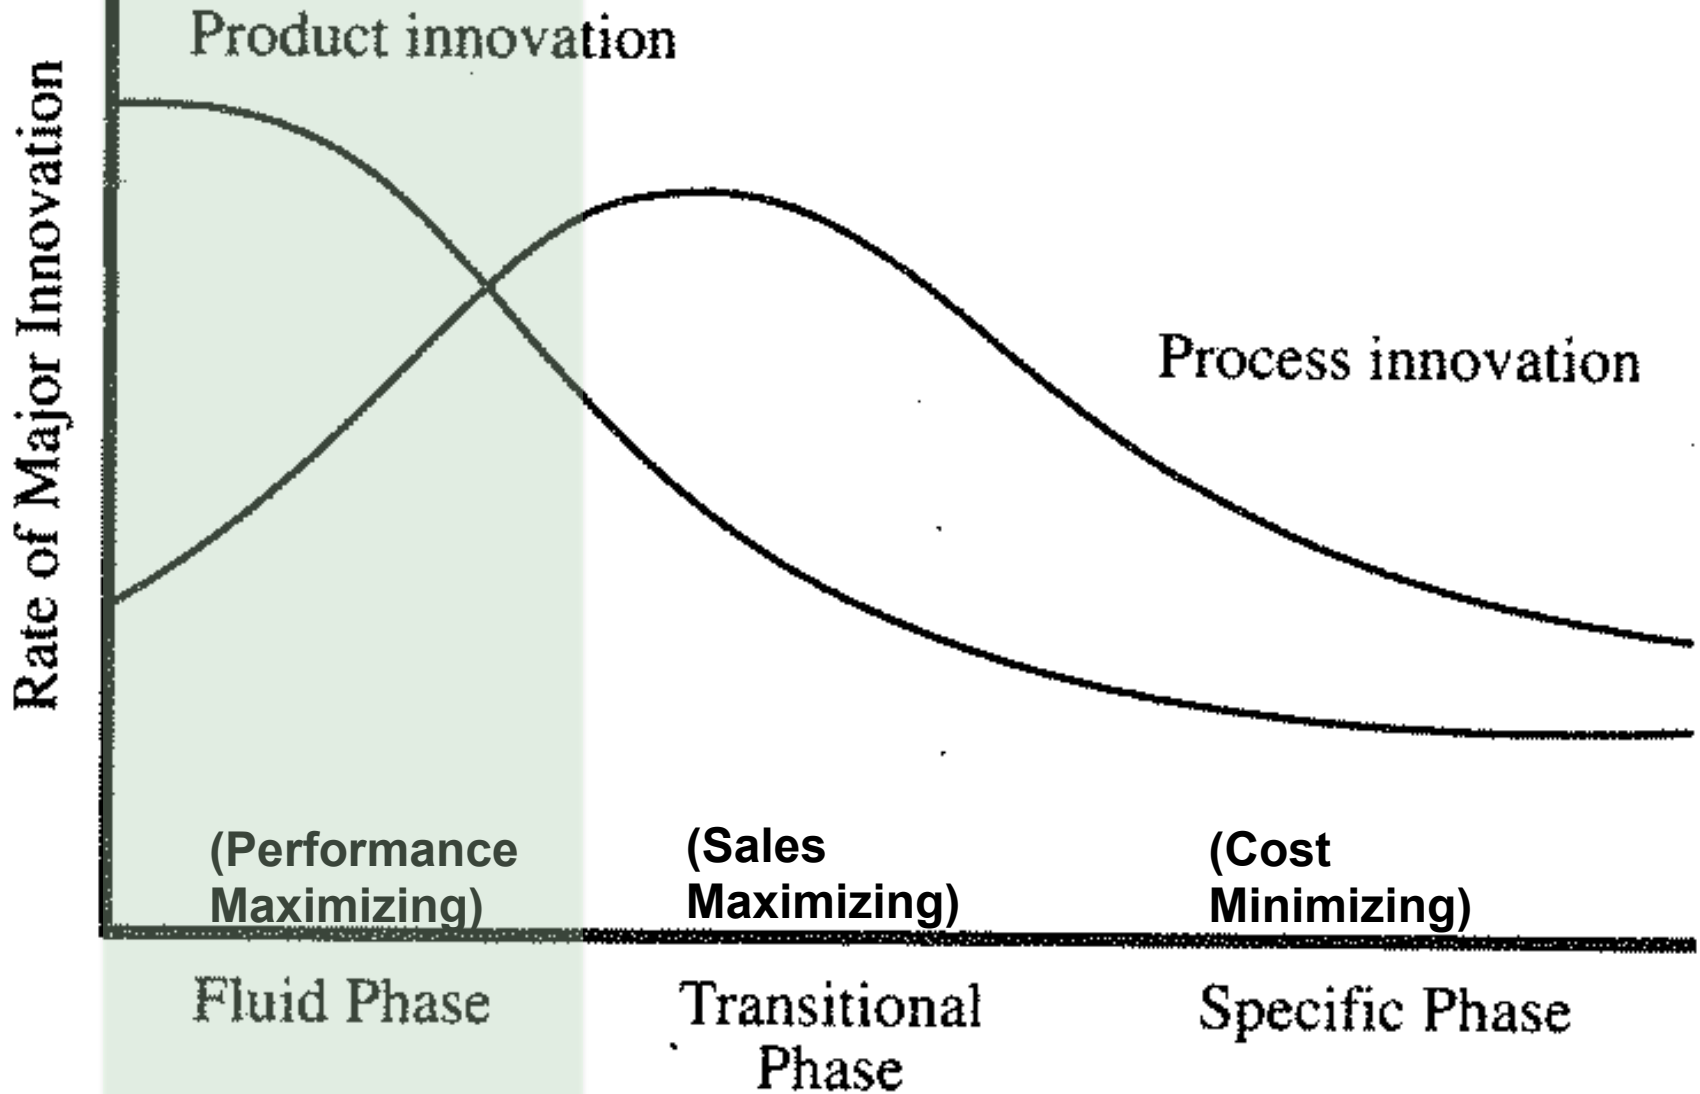

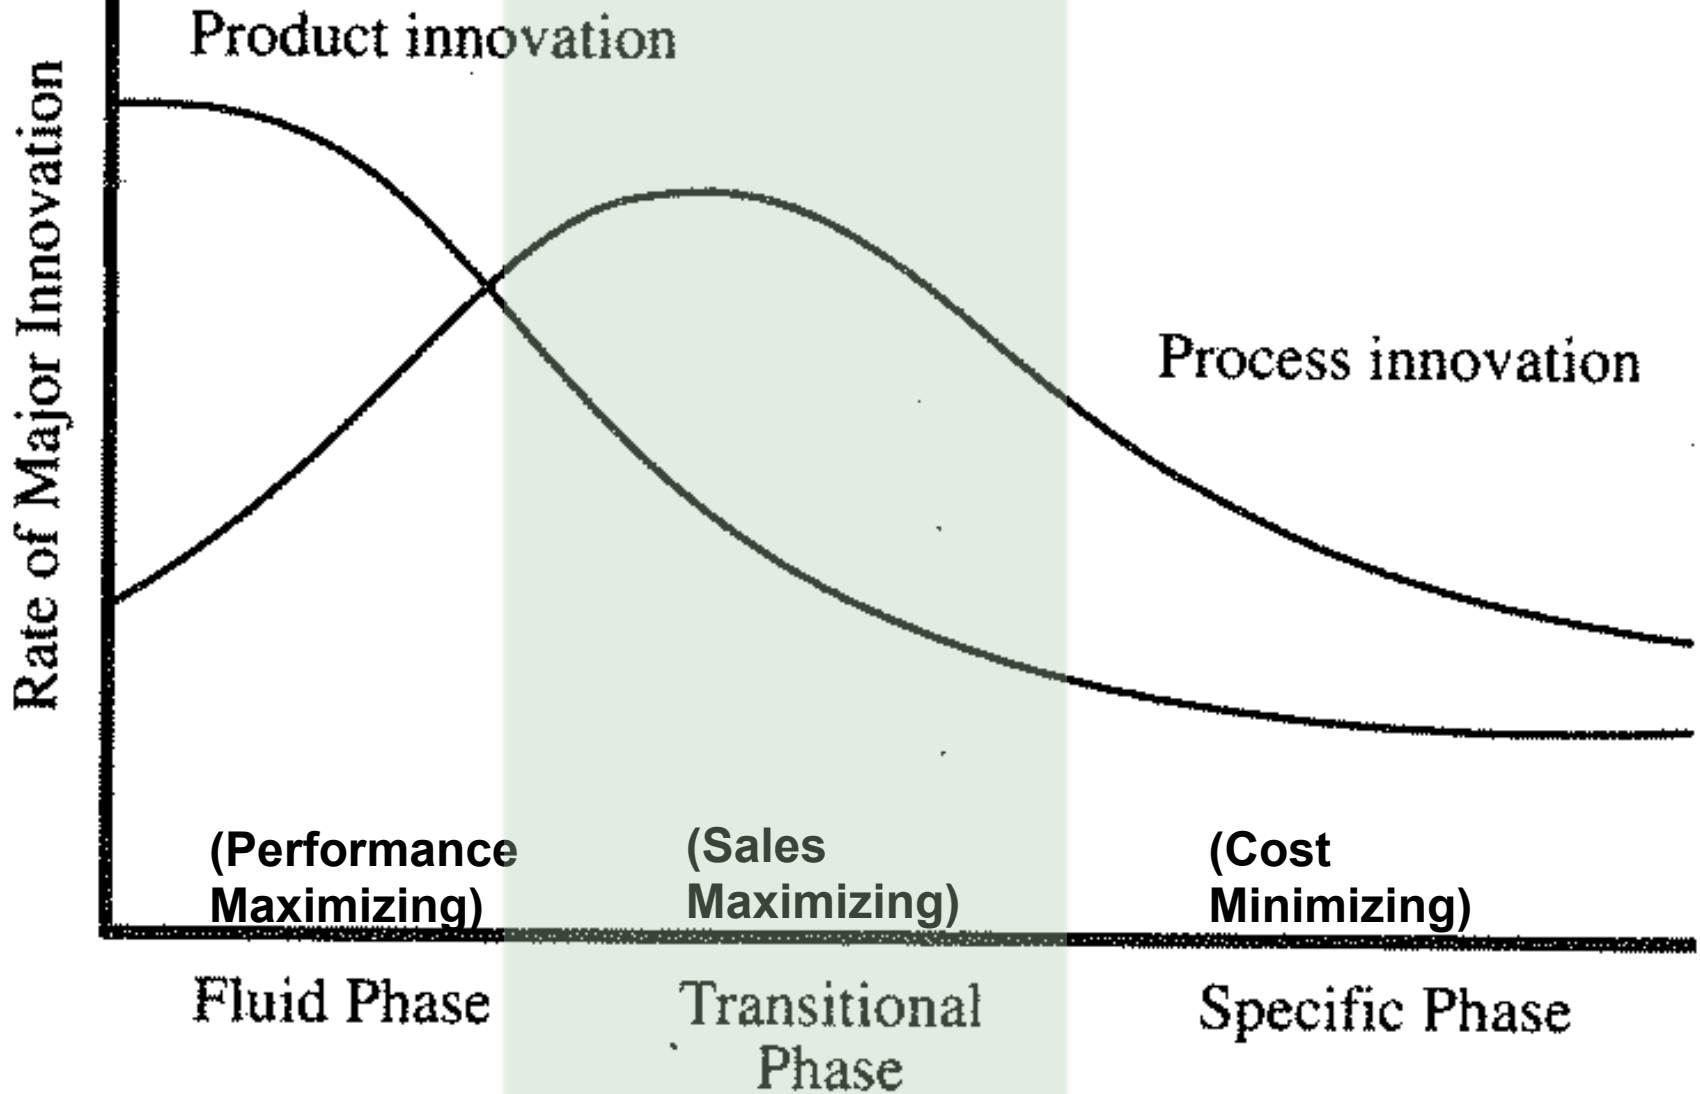

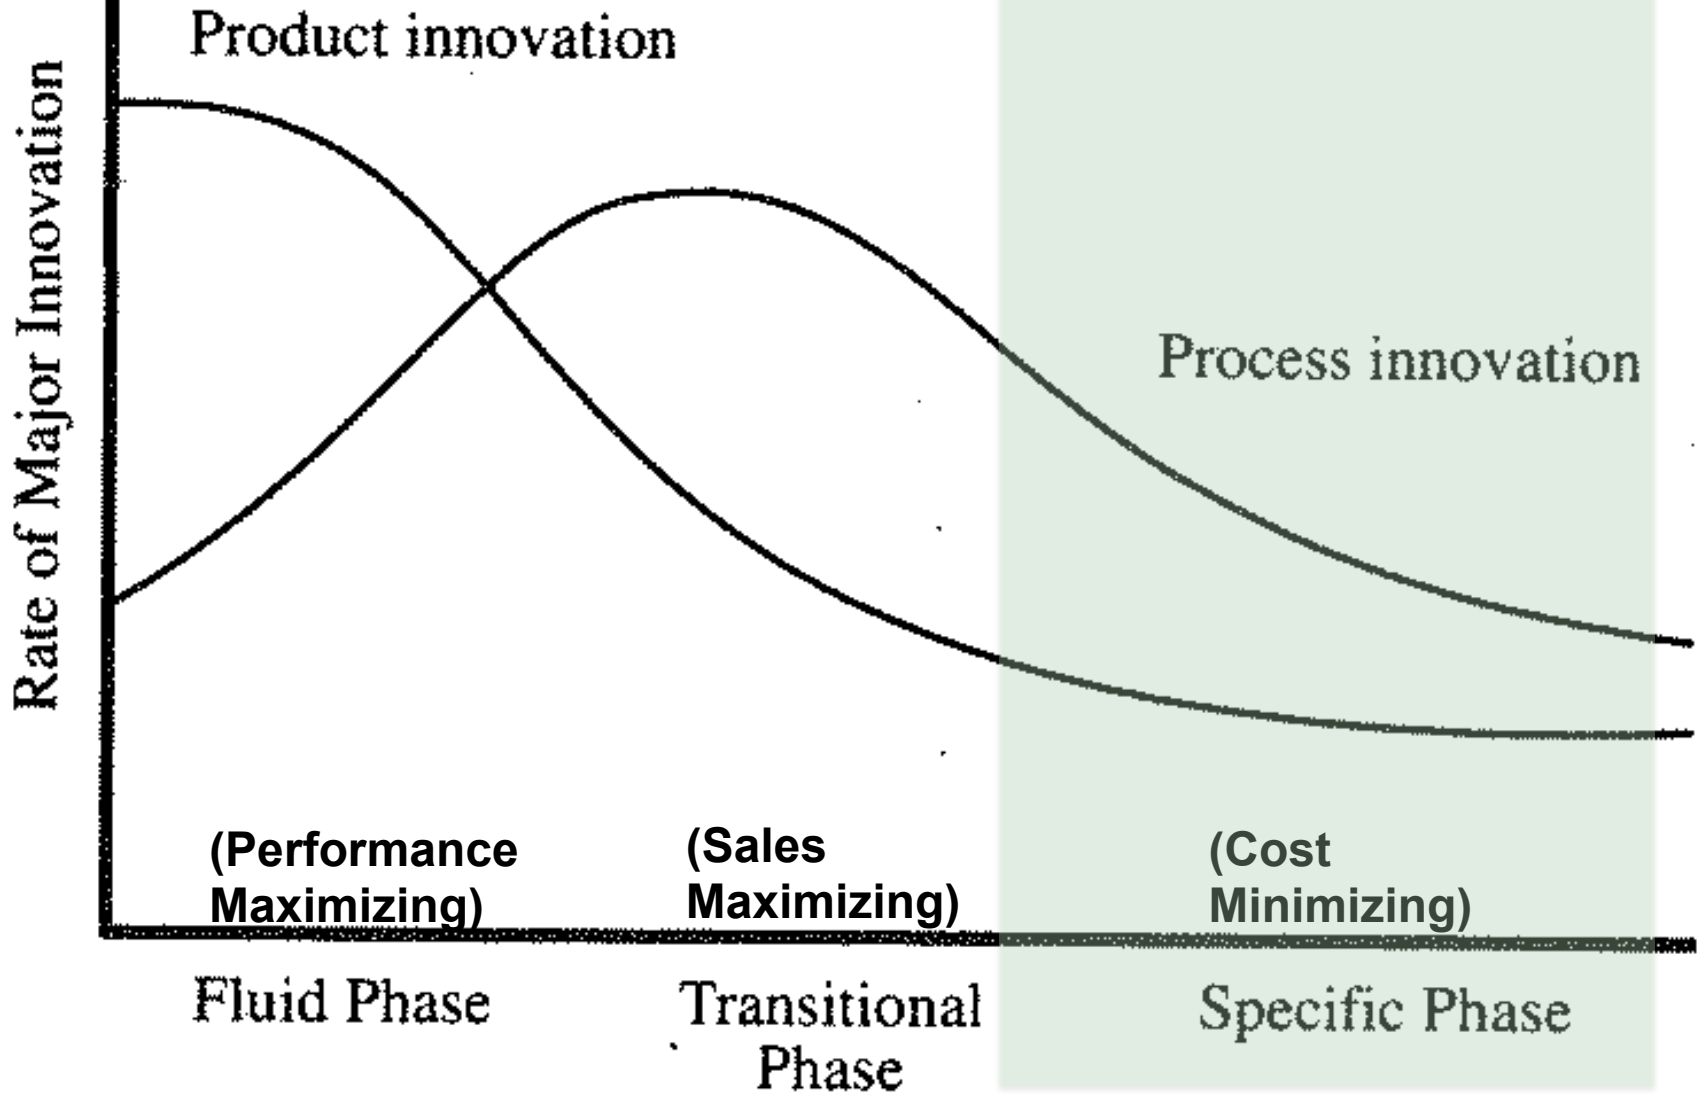

Dominant Design And The Dynamics of Product and Process Innovation

Dominant Design And The Dynamics of Product and Process Innovation

Dominant Design And The Dynamics of Product and Process Innovation

Before DD

More Design Variation

More firms

Easier market entry

Greater risk, likelihood of success

Competition on innovation

After DD

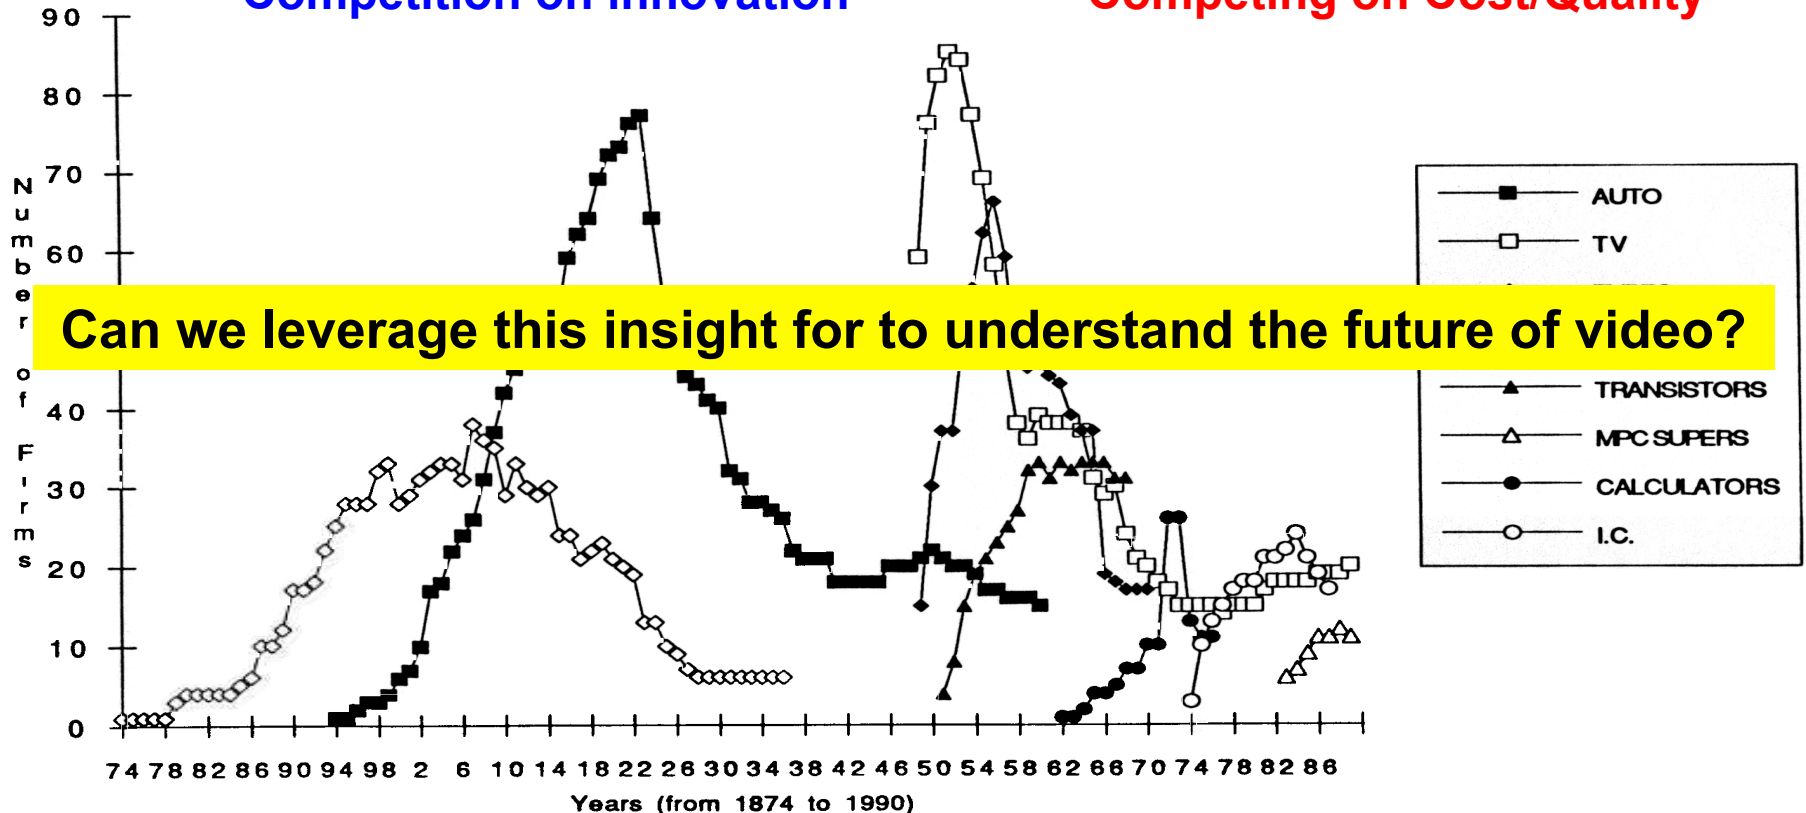

Less Design Variation

Fewer firms

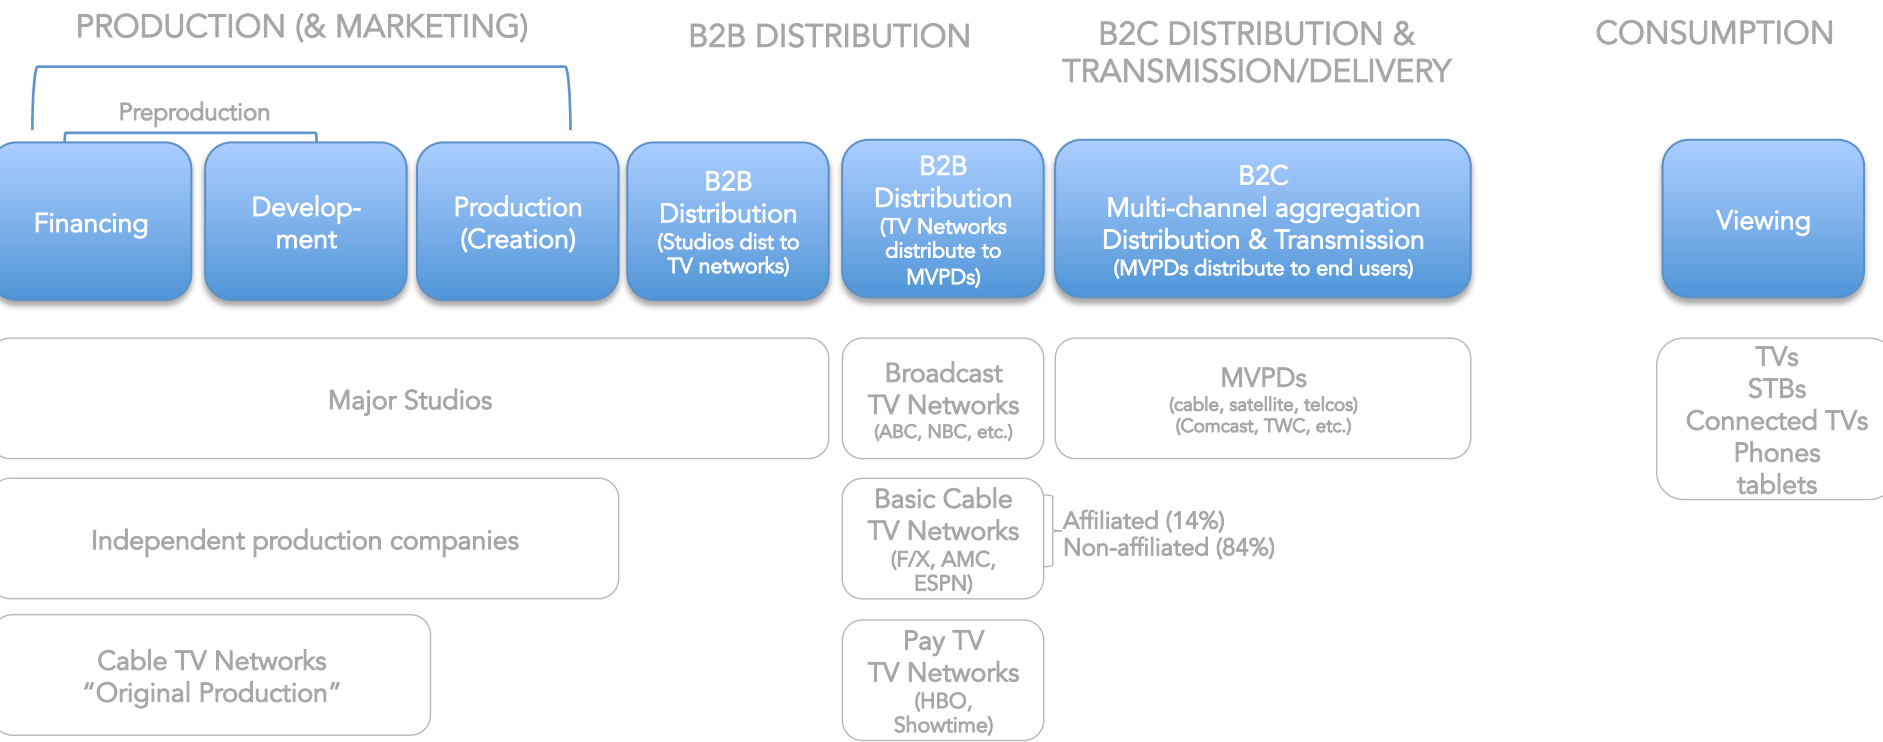

Great barrier to market entry

Lower risk, likelihood of success

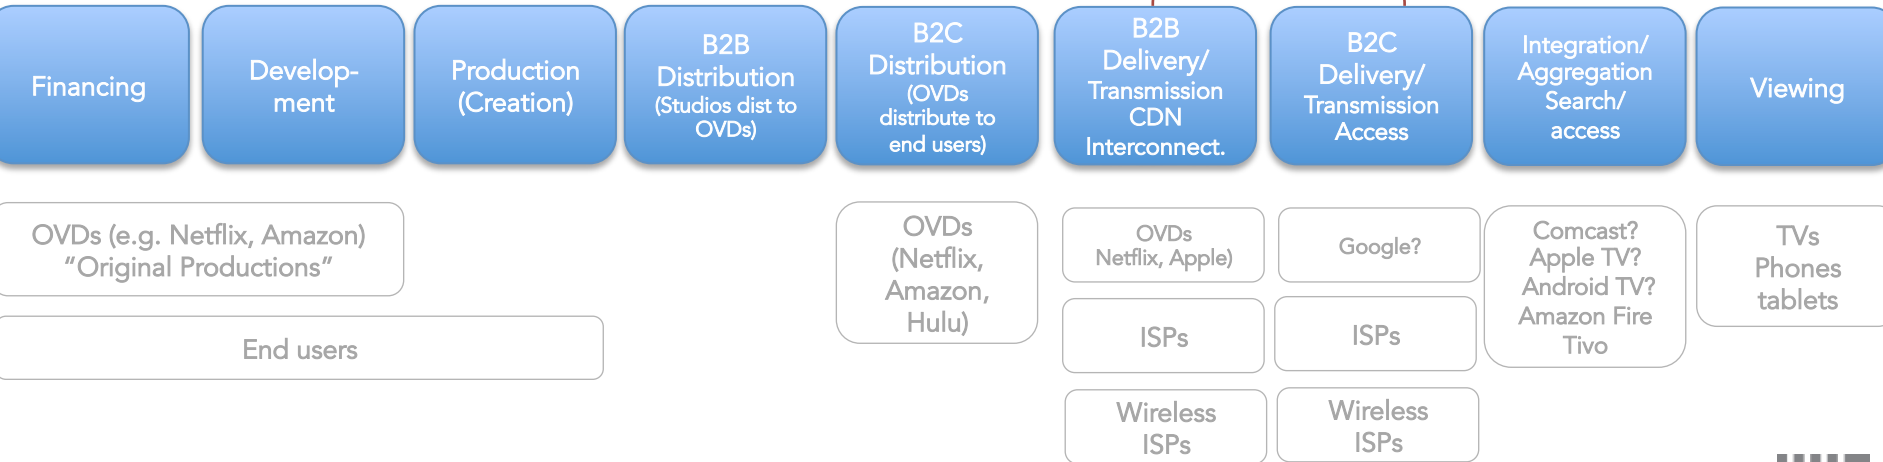

Competing on Cost/Quality

The incumbent MVPD value chain

The entrant OVD value chain

Which hypothesis do you most believe in about the video over IP experience?

1. Will largely converge to a single dominant form of experience
2. Will converge to a distinct experience at each layer (network, service, device), but not the system as a whole
3. Will NOT converge to a single dominant form of experience

**How about applying the dominant design lens to
analyze the future of video?**
