Innovation vs stability

David Clark

CFP Spring Workshop

April 17, 2015

- Reach
  - The Internet should reach to every person by some means.
- Ubiquity
  - The Internet should be available to us everywhere.
- Evolution
  - The Internet should continue to evolve to match the pace and direction of the larger IT sector.
- Uptake
  - The Internet should be used by more of the population.
- Affordable
  - Cost should not be a barrier to the use of the Internet.
- Trustworthy
  - The Internet should provide experiences that are sufficiently free of frustration, fears and unpleasant experiences that people are not deterred from using it.
- Lawful
  - The Internet should not be an effective space for law-breakers.

- National security
  - The Internet should not raise concerns about national security
- Innovation
  - The Internet should be a platform for vigorous innovation, and thus a driver of the economy.
- Generality
  - The Internet should support a wide range of services and applications.
- Unblocked
  - Internet content should be accessible to all without blocking or censorship.
- Choice
  - The consumer should have choices in their Internet experience.
- Redistribution
  - The Internet should serve as a mechanism for the distribution of wealth among different sectors and countries.

- Unification
  - The Internet (and Internet technology, whether in the public net or not) should become a unified technology platform for communication.
- Local values
  - For any region of the globe, the behavior of the Internet should be consistent with and reflect its core cultural/political values.
- Universal values
  - The Internet should be a tool to promote social, cultural, and political values, especially universal ones.
