

Sensors Directorate and ATR Overview

for Integrated Fusion, Performance Prediction, and Sensor Management for ATE MURI

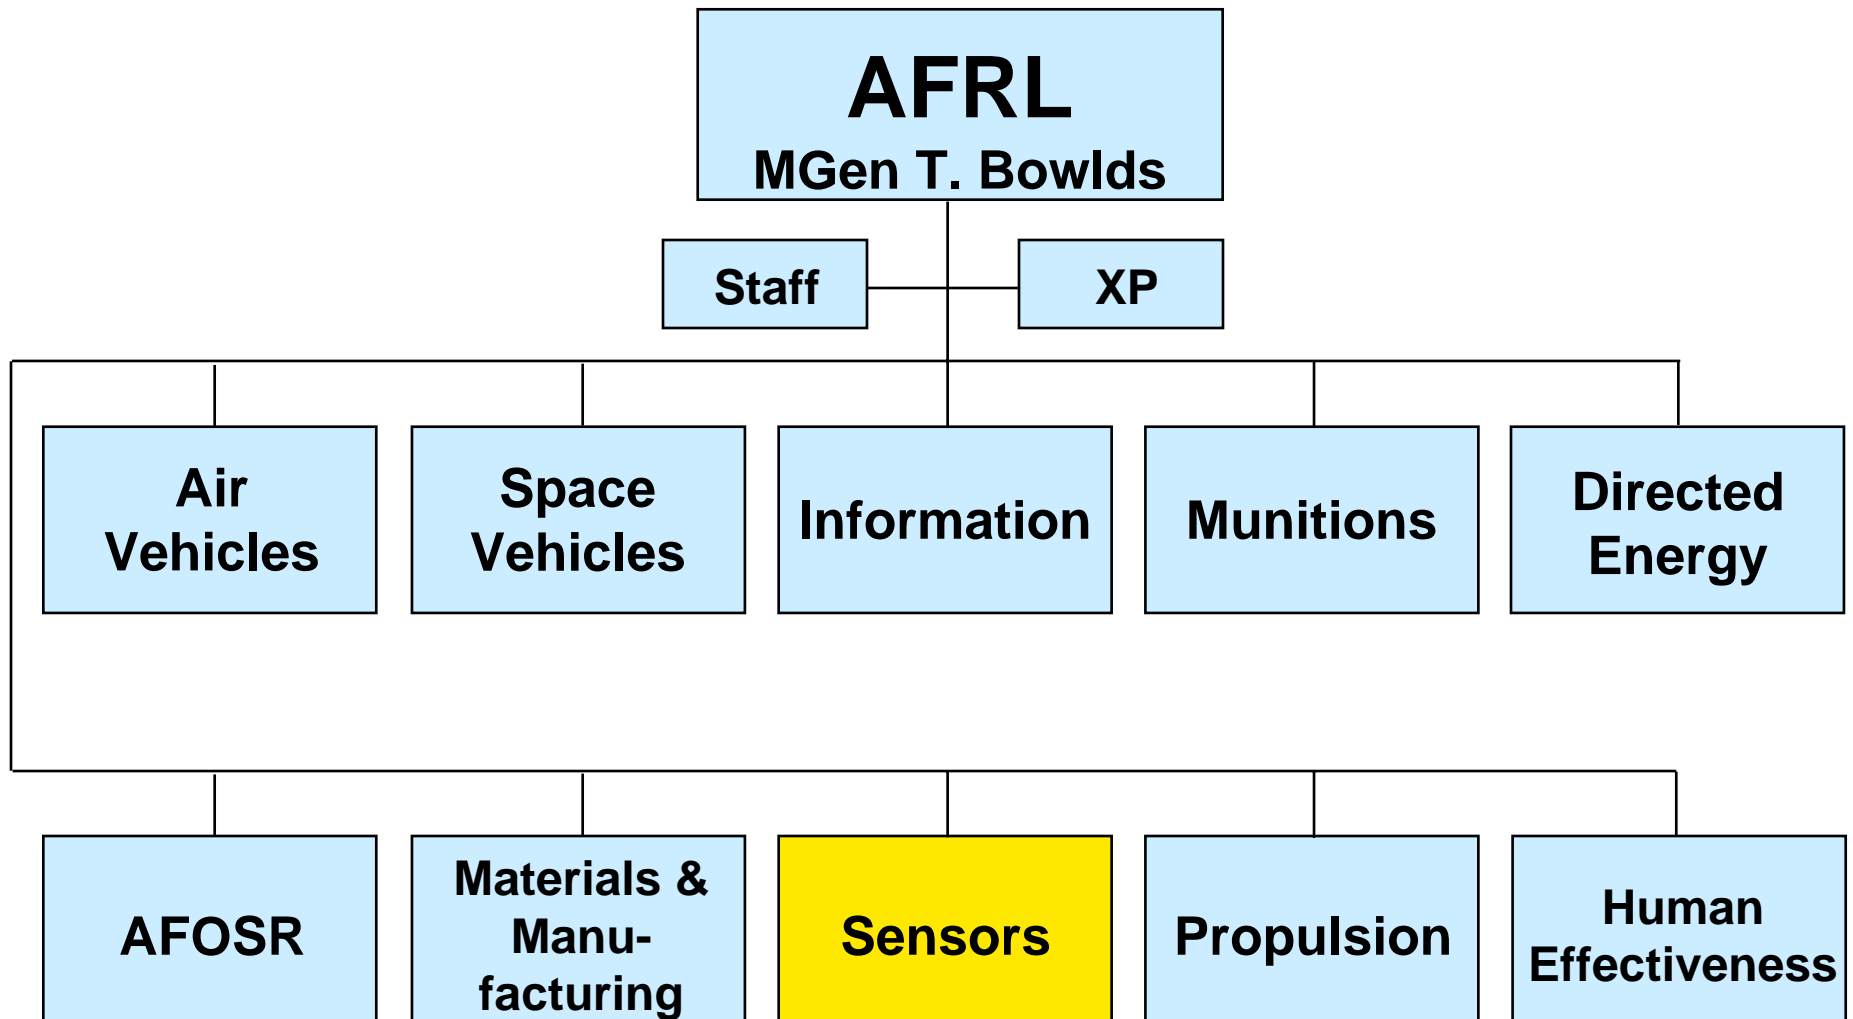

21 July 2006

Lori Westerkamp
Sensor ATR Technology Division
Sensors Directorate
Air Force Research Laboratory

AFRL Technology Directorates

Sensors Directorate

Our Mission

To lead the discovery, development, and integration of affordable sensor and countermeasure technologies for our warfighters.

Our Vision

Robust sensors and adaptive countermeasures that guarantee complete freedom of air and space operations for our forces, and deny these capabilities to our adversaries at times and places of our choosing.

Priority Warfighter Needs

Being Addressed by Sensors Directorate

- **Sense, identify, and track all air and surface targets and threats world wide and in all weather**
- **Counter “difficult” targets (WMD, hidden, LO)**
- **Protect air and space assets**
- **Control the battlespace electromagnetic spectrum**
- **Rapidly prosecute time-critical targets and threats**

Balance: Performance & Affordability

Sensors Directorate Technology Thrusts

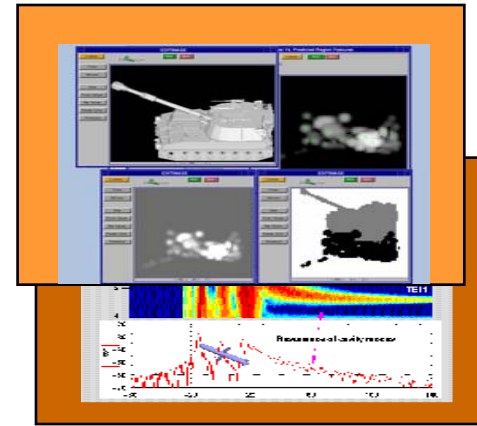

Radio Frequency Sensors & Countermeasures

Electro-Optical Sensors & Countermeasures

Automatic Target Recognition & Sensor Fusion

Application Sub-thrusts

- Battlespace Access
- Persistent ISR of the Battlespace
- Prosecution of Time Sensitive Targets

- Radio Frequency Apertures
- Algorithms & Phenomenology
- Digital Receivers & Exciters
- Reference Systems
- Components

- Transmitters & Receivers
- Phenomenology & Algorithms
- Optical Apertures

- Signatures & Modeling
- Assessment & Foundation
- Innovative Algorithms

Enabling Sub-thrusts

Potential Growth Areas

- **Hidden Target Detection & Identification**
- **Automatic Target Recognition (ATR) & Sensor Fusion**
- **Electronic Warfare**
- **Time Critical Targeting (TCT)**

Signature Center

Sensor Data Management System (SDMS)

Operating Conditions (OCs)

How can we make ATR easier?

- “Better” Features
 - Greater **discriminating** power
 - Less **variability**
- “Better” Data
 - Resolution, dwell, persistence, ...
 - Multiple sources (modes, looks, phenomenologies)

Often conflicting!

Height	2.4 m

ATR-Driven Sensing

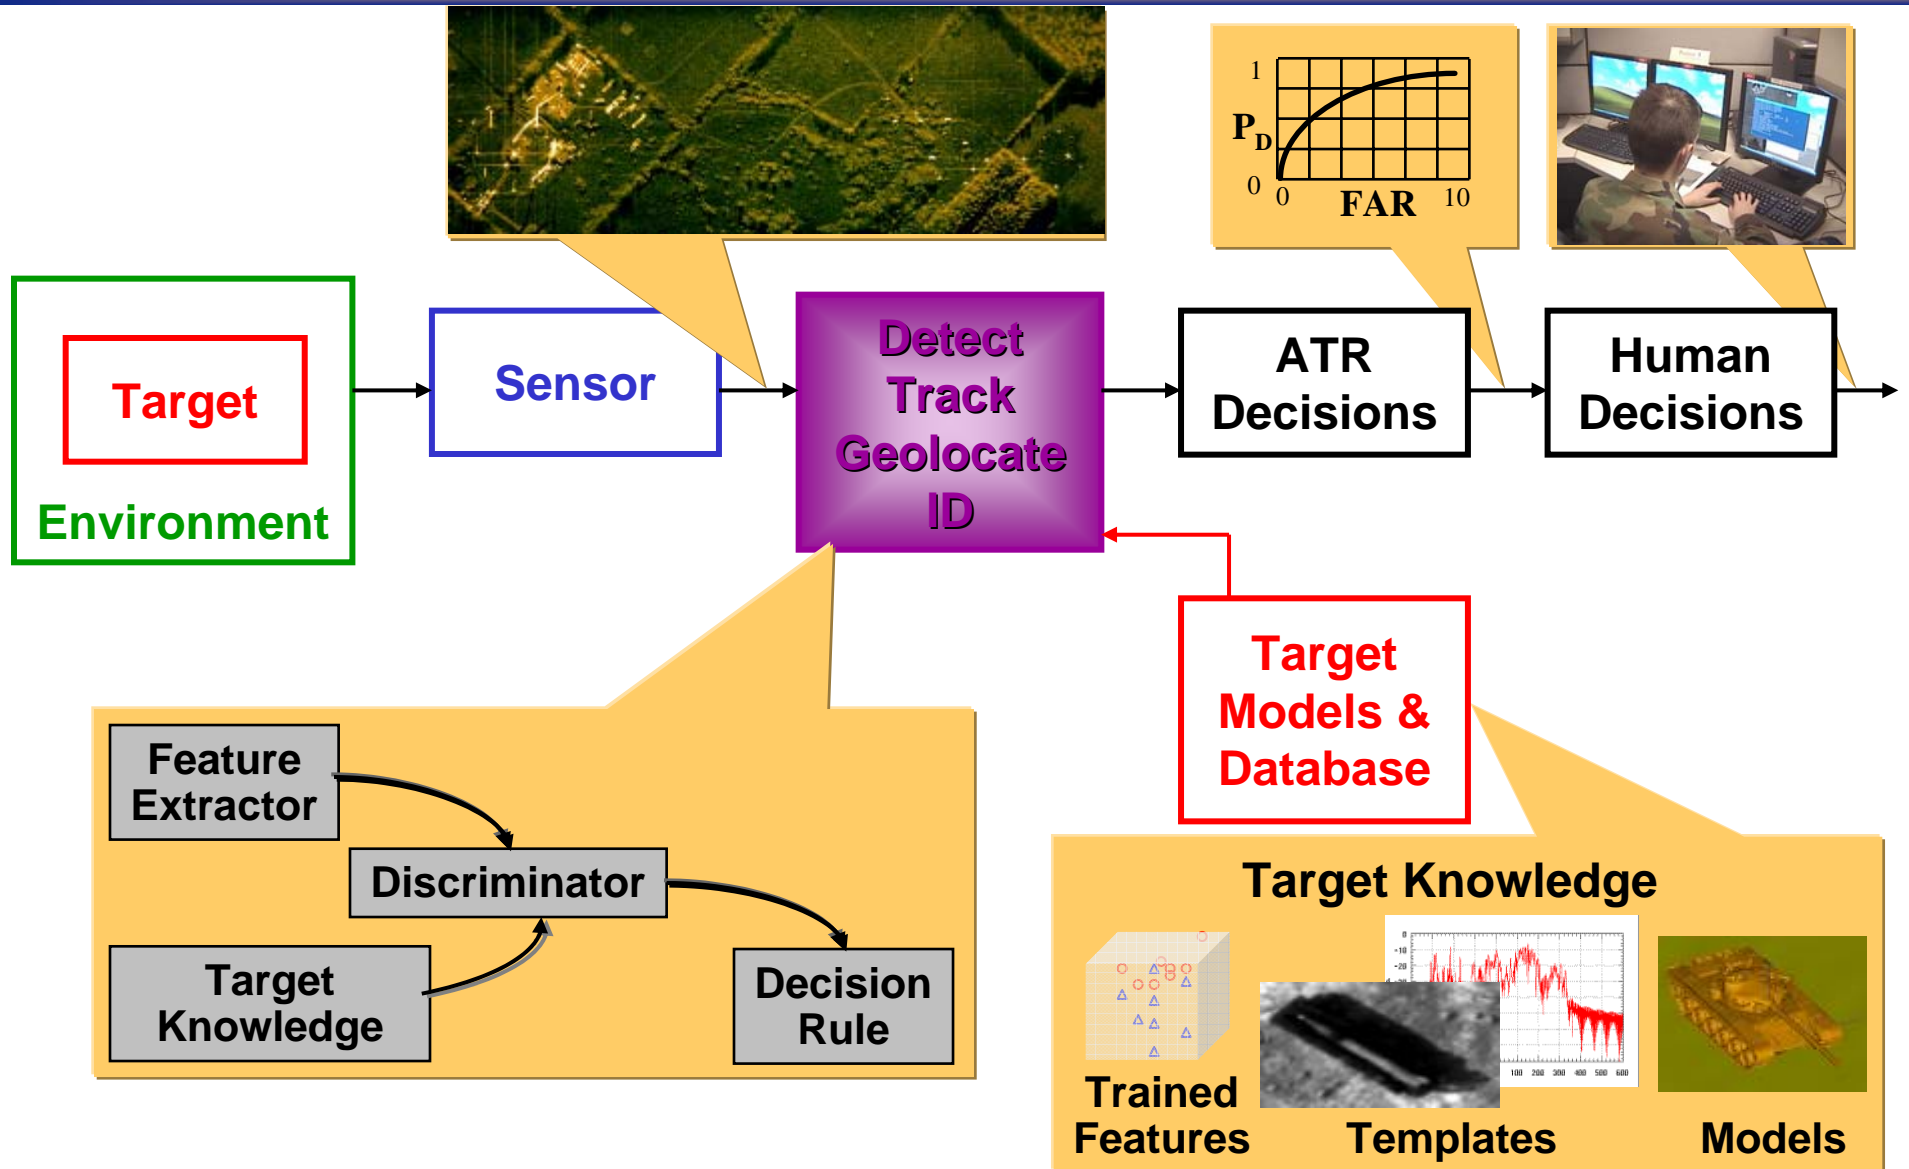

Cueing, Prioritization for the Human

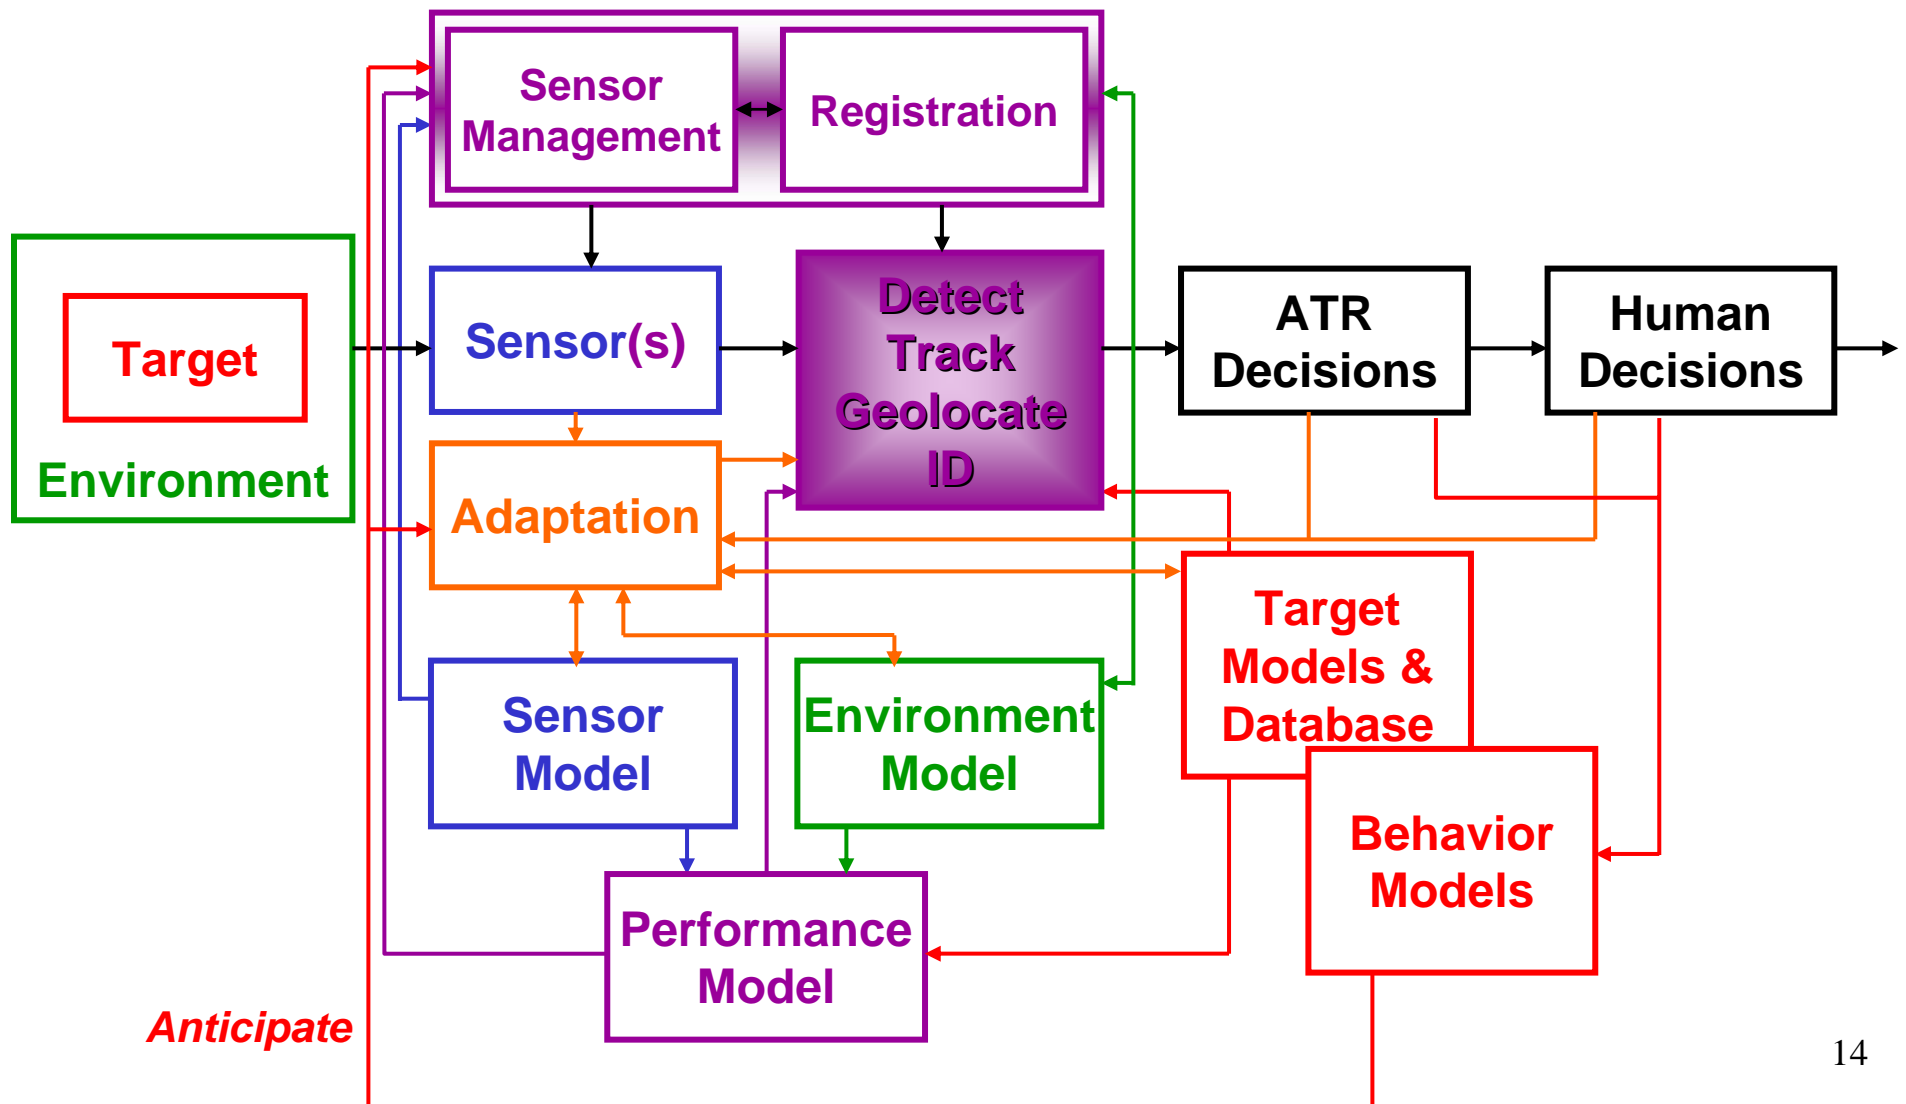

'Clear Box' View of ATR

Multiple Sensor ATR

ATR Theory Goals

- Performance Prediction
 - Algorithm (or feature) dependent
 - As a function of sensing, target, and environment conditions
 - Tool for developers (how will this new feature help?), “maturers” (does this work well enough for my application?), and users (is this system going to work in my scenario today?)
- Performance Bounds
 - Algorithm independent performance limits
 - As a function of sensing, target, and environment conditions
 - Is the limit the algorithm (keep working) or the sensor (motivate sensor improvements)?
- Performance Models
 - Packaged tools from Performance Prediction usable by sensor management and fusion algorithms to weigh sensor contribution

Growing ATR Complexity
